

# Journal of Mathematical Analysis and Applications

## ASSOCIATE EDITORS

VLADIMIR ANDRIEVSKII <i>Kent State University*</i> Approximation theory Potential theory	GIUSEPPE MARIA COCLITE <i>Politecnico di Bari</i> Applied mathematics Nonlinear PDEs	SØREN EILERS <i>University of Copenhagen</i> Selfadjoint operator algebras Symbolic dynamics K-theory and operator algebras Enumerative combinatorics	YU HUANG <i>Zhongshan University*</i> Dynamical systems Chaos Control theory
JOSEPH A. BALL <i>Virginia Polytechnic Institute and State University*</i> Operator and control theory	PATRICK L. COMBETTES <i>North Carolina State University*</i> Convex optimization Inverse problems Nonlinear functional analysis	PAVEL EXNER <i>Doppler Institute for Mathematical Physics and Applied Mathematics</i> Spectral and scattering theory of differential operators	KRZYSZTOF JAROSZ <i>Southern Illinois University, Edwardsville*</i> Functional analysis Spaces of analytic functions of a single variable
ANTON BARANOV <i>Department of Mathematics and Mechanics</i> <i>Saint Petersburg State University</i> Complex analysis Harmonic analysis Operator theory	SHAUN COOPER <i>Institute of Natural and Mathematical Sciences</i> <i>Massey University</i> Analytic number theory Special functions	LAWRENCE FIALKOW <i>State University of New York</i> Functions of a complex variable Integral transforms, operational calculus Operator theory	HYEONBAE KANG <i>Inha University</i> Inverse problems Partial differential equations
JESUS BASTERO <i>Universidad de Zaragoza*</i> Asymptotic geometric analysis Geometry of Banach spaces Function spaces	GUSTAVO CORACH <i>Instituto Argentino de Matematica*</i> Functional analysis Operator theory Harmonic analysis	JERZY A. FILAR <i>School of Mathematics and Physics</i> <i>University of Queensland</i> Optimization Operations research Markov decision processes Game theory Singular perturbations Application	DMITRY KHAVINSON <i>University of South Florida*</i> Classical analysis
BRUCE C. BERNDT <i>University of Illinois*</i> Analytic number theory Classical analysis Special functions	ZELJKO CUCKOVIC <i>University of Toledo</i> Complex analysis in one and several variables Operator theory	STEPHEN A. FULLING <i>Texas A&amp;M University</i> Theoretical physics Spectral and asymptotic theory of differential operators	PEKKA KOSKELA <i>Department of Mathematics and Statistics</i> <i>University of Jyväskylä</i> Quasiconformal mappings Sobolev spaces Analysis on metric spaces
DAVID BLECHER <i>University of Houston*</i> Functional analysis Operator theory Operator algebras	ARIS DANIILIDIS <i>Universitat Autònoma de Barcelona</i> Variational analysis Optimization	STEFAN GEISS <i>University of Jyväskylä</i> Stochastic analysis Interpolation theory Backward stochastic differential equations Probability in Banach spaces	MIKLÓS LACZKOVICH <i>Department of Analysis</i> <i>Eötvös Loránd University</i> Real functions Measure theory
GEORGE BLUMAN <i>University of British Columbia*</i> Differential equations	TOMÁS DOMÍNGUEZ BENAVIDES <i>Facultad de Matematicas</i> <i>Universidad de Sevilla</i> Nonlinear functional analysis	BENJAMIN GESS <i>Universität Bielefeld*</i> and <i>Max Planck Institute for Mathematics in the Sciences</i> Stochastic partial differential equations Nonlinear partial differential equations Stochastic dynamics	WILLIAM LAYTON <i>University of Pittsburgh*</i> Differential equations Fluid mechanics Turbulence
JOSÉ BONET <i>Universidad Politécnica de Valencia</i> Functional analysis Operator theory	DONATELLA DONATELLI <i>Department of Information Engineering, Computer Science and Mathematics</i> <i>University of L'Aquila</i> Mathematical fluid dynamics Analysis of Navier Stokes equations Partial differential equations of hyperbolic type	RUTH GORNET <i>University of Texas at Arlington*</i> Spectral geometry	PIERRE GILLES LEMARIE-RIEUSSET <i>Université d'Evry</i> Harmonic analysis Nonlinear PDEs Wavelets
BENEDETTO BONGIORNO <i>Dipartimento di Matematica ed Appl.</i> <i>University of Palermo</i> Real analysis	KATHY DRIVER <i>University of Cape Town</i> Special functions including trigonometric functions Approximations and expansions	JEAN LUC GUERMOND <i>Texas A&amp;M University</i> Fluid mechanics Partial differential equations Numerical analysis	JONATAN LENELLS <i>KTH Royal Institute of Technology*</i> Nonlinear dispersive waves PDEs Integrable systems
GUILLAUME CARLIER <i>Université Paris Dauphine</i> Calculus of variations Optimal transport Mathematical economics	YIHONG DU <i>University of New England</i> Nonlinear elliptic and parabolic equations Nonlinear analysis	CRISTIAN GUTIERREZ <i>Temple University*</i> Partial differential equations Harmonic analysis	TONG LI <i>University of Iowa*</i> Nonlinear hyperbolic conservation laws Shock waves Combustion Traffic flow Chemotaxis
MARIA CARRO <i>Universidad de Barcelona</i> Real analysis Harmonic analysis	RICARDO G. DURÁN <i>University of Buenos Aires</i> Finite element methods Harmonic analysis	XIAOJUN HUANG <i>Rutgers University, New Jersey*</i> Complex geometry Several complex variables	HUAXIN LIN <i>University of Oregon*</i> Operator algebras
ANDREA CIANCHI <i>Università degli Studi di Firenze</i> Function spaces Partial differential equations			FELIX LINDNER <i>University of Kassel</i> Stochastic ordinary and partial differential equations Applied stochastic
CHRISTIAN CLASON <i>Universität Duisburg-Essen</i> Inverse problems Non-smooth and PDE-constrained optimization Biomedical imaging			

\*Department of Mathematics

HAILIANG LIU <i>Iowa State University</i> Hyperbolic partial differential equations Numerical analysis	ROMAN POPOVYCH <i>University of Vienna*</i> Ordinary differential equations Partial differential equations	JUNPING SHI <i>College of William and Mary</i> Partial differential equations Nonlinear analysis Mathematical biology	BRETT WICK <i>Department of Mathematics &amp; Statistics</i> <i>Washington University in Saint Louis</i> Harmonic analysis Complex analysis Operator theory
ALESSANDRA LUNARDI <i>Università degli Studi di Parma*</i> Elliptic and parabolic partial differential equations Abstract evolution equations	VLADIMIR POZDNYAKOV <i>Department of Statistics</i> <i>University of Connecticut</i> Probability theory Mathematical statistics	AIDAN SIMS <i>School of Mathematics and Applied Statistics</i> <i>University of Wollongong</i> Functional analysis C*-algebras Topological dynamical systems Operator K-theory and KK-theory Noncommutative geometry	MICHAEL WINKLER <i>Universität Paderborn</i> Parabolic partial differential equations Blow-up phenomena
JAN MALÝ <i>Department of Mathematical Analysis</i> <i>Charles University, Prague</i> Sobolev mappings Measure and integration Real analysis	MARC QUINCAMPOIX <i>Université de Bretagne Occidentale</i> Deterministic and stochastic control Differential equations and inclusions Nonsmooth optimization Differential games	ROBERT STELZER <i>Ulm University</i> Probability theory and stochastic processes Statistics Game theory, economics, social and behavioral sciences	JIE XIAO <i>Memorial University of Newfoundland</i> Partial differential equations Harmonic and complex analysis
ANDREI MARTINEZ-FINKELSHTEN <i>Baylor University and University of Almería</i> Approximation theory Orthogonal polynomials Special functions and applications Riemann-Hilbert problems and asymptotic analysis Complex analysis Mathematical modelling, ophthalmology and vision science	VICENTIU RADULESCU <i>Institute of Mathematics</i> <i>"Simion Stoilow"</i> <i>Romanian Academy</i> Nonlinear elliptic partial differential equations Critical point theory Nonlinear analysis Variational and hemivariational inequalities	EMIL J. STRAUBE <i>Texas A&amp;M University*</i> Several complex variables	YOSHIO YAMADA <i>Waseda University</i> Partial differential equations
MARTIN MATHIEU <i>Queen's University Belfast</i> Functional analysis Operator theory	THOMAS RANSFORD <i>Laval University</i> Complex analysis Potential theory Operator theory	AGNES SULEM <i>INRIA Paris-Rocquencourt</i> Stochastic control Financial mathematics	TONG YANG <i>City University of Hong Kong</i> Partial differential equations Fluid and gas dynamics Kinetic equations
LAJOS MOLNAR <i>University of Szeged</i> Functional analysis Operator theory	DUŠAN REPOVŠ <i>University of Ljubljana</i> Topological methods in nonlinear analysis Applications of the functional analysis Set-valued analysis	SHU-MING SUN <i>Virginia Polytechnic Institute and State University</i> Water wave problems PDE theory for the equation derived from water wave problems	PENGFEI YAO <i>Academy of Mathematics and System Science</i> <i>Chinese Academy of Science</i> Partial differential equations Systems and control Nonlinear elasticity
MONICA MUSSO <i>University of Bath*</i> Concentration phenomena in nonlinear elliptic equations Blow-up phenomena in nonlinear parabolic equations	EERO SAKSMAN <i>University of Helsinki</i> Functions of a complex variable Partial differential equations Fourier analysis Stochastic processes Operator theory	BRIAN S. THOMSON <i>Simon Fraser University*</i> Real variables	HONG-MING YIN <i>Washington State University</i> Partial differential equations and applications Financial engineering and portfolio management Electromagnetic fields
LARS OLSEN <i>University of St Andrews</i> Fractal geometry Multifractal geometry Measure theory Ergodic theory Dynamical systems Classical real analysis	RENE SCHILLING <i>Institut für Math. Stochastik</i> <i>TU Dresden</i> Analytic methods in probability theory Pseudodifferential operators and Markov processes Semigroups Stochastic processes with jumps	SERGEY TIKHONOV <i>ICREA and CRM</i> Approximation theory Fourier analysis	NICHOLAS YOUNG <i>Leeds University</i> <i>Newcastle University</i> Operators on Hilbert space Complex analysis H infinity control
HAROLD R. PARKS <i>Oregon State University*</i> Geometric analysis Calculus of variations	MICHAEL J. SCHLOSSER <i>University of Vienna*</i> Special functions Difference and functional equations	DEHUA WANG <i>University of Pittsburgh</i> Partial differential equations	XU ZHANG <i>Sichuan University and Chinese Academy of Sciences</i> Control theory Partial differential equations Stochastic analysis
MARCO PELOSO <i>Università degli Studi di Milano</i> Harmonic analysis Several complex variables		C. EUGENE WAYNE <i>Boston University*</i> Dynamical systems Partial differential equations	HANS ZWART <i>Department of Applied Mathematics</i> <i>University of Twente</i> Control theory
		WOLFGANG L. WENDLAND <i>Universität Stuttgart*</i> Integral equations Partial differential equations Numerical analysis
